DETAILED ACTION

Election/Restrictions

1. Applicant's election of Species I in the reply filed on 17 September 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Objections

2. Claims 1 and 13 are objected to because of the following informalities:
 - a. claim 1, line 3, "the universal anchor" should read --the anchor--;
 - b. claim 13, line 3, " the universal anchor" should read --the anchor--;
 - c. claim 13, line 4, "it" should read --the movable member--.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 6-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
-

Claim 6 recites the limitation "said magnet" in lines 2-3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 2, 4-6, 9, 10, and 12-15, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,690,356 to Lane, Jr.

Lane, Jr. discloses a detection device that includes all the limitations recited in claims 1, 2, 4-6, 9, 10, and 12-15, as best understood. Lane, Jr. shows a detection device having a housing (Fig. 2), a moveable member 82 (Fig. 2) slidably received within the housing and including a slide portion and an actuating end, a sensing switch 80 (Fig. 2) to detect the movement of the movable member and providing a detectable signal when the movable member is moved that is received by a controller of an airbag module (see column 2, lines 49-53), and a Hall effect device of the sensing switch (see column 2, lines 47-49) wherein the housing is capable of being fixedly secured to a universal anchor and the movable member is biased into a first position blocking an opening of the anchor. The description of the detection device inherently discloses the method for determining whether a securement member is secured to a universal anchor.

7. Claims 1-10 and 12-15, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,419,199 B1 to Skofljanec et al.

Skofljanec et al. disclose a detection device that includes all the limitations recited in claims 1-10 and 12-15, as best understood. Skofljanec et al. show a detection device having a housing 11,31 (Fig. 5a), a moveable member 13 (Fig. 5b) slidably received within the housing and including a slide portion with a magnet 21 (Fig. 3a) and an actuating end, a sensing switch 17 (Fig. 3a) to detect the movement of the movable member and providing a detectable signal when the movable member is moved that is received by a controller of an airbag module, and a Hall effect device 19 (Fig. 3a) of the sensing switch wherein the housing is capable of being fixedly secured to a universal anchor and the movable member is biased into a first position blocking an opening of the anchor. The description of the detection device inherently discloses the method for determining whether a securement member is secured to a universal anchor.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
